

**NORTHWEST FLORIDA STATE COLLEGE**  
**Department of Mathematics**

**The `popupmenu` Package Test File**

**D. P. Story**

This file uses the `eforms` package to create push buttons, the push button of `hyperref` can also be used.

Here is an example taken from the Acrobat JavaScript API Reference:

We can add a push button with a rollover effect

You can also open the menu with a link: [Package](#). Links do not have a rollover effect, however, you can use buttons like so: [Packages](#).

This is a version that has a local version of the menu array: [Packages](#)
